Hello,

This email message is a notification to let you know that
a file has been uploaded to the Files area of the cs700
group.

File : /FL STATE CS-700 CODEPLUG.rdt
Uploaded by : ad4c2008 <ad4c@...>
Description : This is the CS-700 codeplug for FL state with all DMR and analog repeaters by zones and channels (talkgroups).
You just need to download it and change the radio allias and ID with yours .Feel free to contact me if you have any doubt with it.
Hector
AD4C

You can access this file at the URL:

2. 15 members, maybe this is the wrong group for CS700 owners?

Yahoo group: cs700
Date: 2015-01-28 23:43:22 UTC
From: kq4bx@...
Topic: 2 Message: 2

I have a CS700 and want to learn more about DMR and programming the radio. I am doing fine for now, but I realize that there is a lot more to know. So this looks like the first message in this group, could I be wrong?

I am using a code plug from AD4C, and while I could get parts of it to work for me, there is a lot in it that brings on questions.

I hope to see more traffic in this group soon.

Joe

From: kq4bx@...
Topic: 4 Message: 4

OK, in the CS700 programming, there is a setting for Digital RX Group Call. Can you explain what its purpose is, how it's used, and show an example of it?

If that is the video I watched on programming a CS700, it is great. He does more for the DMR community with that one video than anyone really gives him credit for. However, I am past that and want to know more advanced programing Did you notice is Michael explained Digital RX Group calls?

Man I feel like i'm back in highschool. (Name a verb and use it in a sentence.. ahahaha)

Well lets go a bit back to the Channel Information.

When you create a new channel there are a ton of entries that you need to populate.

Some are obvious (Channel Mode, Channel Name, Frequency RX/TX) But then there is Contact Name and Group List.

Contact Name is what talk group you will be transmitting on when keyed up.

Group List is what talkgroup you will be listening on that specific memory.

So as an example.

I have a channel called VA3RFT NA It has all the frequency info for the repeater.

Under Contact Name I have North America (this list is populated by your Digital Contacts)
Under Group List I have a group Called NA that's populated with the same North America Contact.

When you create a Group List you are doing the equivalent of adding multiple RX tones. Technically you could have all your contacts in there but would only be able to TX on whatever you programmed for Contact Name.

I hope that was as confusing to read as it was to write. If you want I can always walk you thru hands on with a screen share or Teamviewer.

Jeff, you have to consider that you might be an expert in business band radio programming, and most hams, including myself understand the single level programming of FM repeaters. The DMR world is a multilevel world of programming, and I do understand about time slots and that not all DMR repeaters are programmed to use the time slots in the same way, but the ones that are part of DMR MARC all use on time slot for the connection to North America, and the other for local traffic.
I also know that FPL has their own Hytera network and it is not connected to, and can't communicate with the Motorola repeater network, otherwise known as DMR-MARC. MARC standing for Motorola Amateur Radio Club. Is that they great divide that makes all of you Motorola aficionados assume that everybody that gets into DMR knows everything about business band radio programming? That is not a good way to introduce new technology to your fellow non-Motorola hams.

I know enough to program my own radio in the most basic sense. I can create channels, make zones, populate those zones with channels, and add digital contacts so I will know who I am talking to.

Excuse my ignorance of programing my CS700 past that level. if you use any assumptions in your explanation, you will get nowhere with anyone new to DMR. If you use the standard way an FM repeater get programmed, and build on that while you explain how DMR gets programed, the process might get harder for you to explain, but easier for newbies to understand.

I know enough to explain most of DMR to D-Star users, but then I would be assuming that every person who uses D-Star understands how it all works. I would be wrong.

I will stay with DMR as long as it takes to understand it complexly.

Exactly my point in asking the group..

CSI site says to review yahoo group for details. Yahoo has no more details... guess I will put it back in the box for a few more months since the radio is not usable. Been chasing my tail for months trying to increase audio where others can hear me. Its not a pleasure being told to speak up all the time.

on the CS7000 group CSI posted saying that the CS700 Firmware is owned by another 3rd party company. He has mentioned it to them but they don't seem to be in a rush to fix it. This is why I believe he is trying to get the 7000 project off the ground so that things like that can be fixed in a timely manner.

16. Re: [cs700] CS-700 Updated Firmware

Yahoo group: cs700
Date: 2015-02-19 14:04:03 UTC
From: mjb@...
Topic: 12 Message: 16

When I first got my CS700, I had one or two requests to "talk up" -- I did, and things were fine.

Shortly after, I added the speaker-mike, and typically use it just because it's a more comfortable way to use the radio. And have not had a low audio comment since. Very happy with the radio.

Should the fix be made, I will apply it. But I'm enjoying learning DMR and being active on new repeaters in the meantime.

I ordered the standard Connect Systems speaker-mike right from Jerry.

20. Speaker/mic

Yahoo group: cs700
Date: 2015-02-20 13:08:49 UTC
From: HECTOR
Topic: 12 Message: 20

I just ordered the Motorola speaker/mic from a guy from Jacksonville/FL for $18, that one works better than the one from CS, I tested before and it give louder audio on RX and TX. For the ones who might be interested in the FL state codeplug for the CS-700, go to qrz.com, enter my call sign, move the page down to where you see the CS-700 picture and right there there is a blue color link that when you click in it, will take you to my other webpage where you can download my own codeplug, it has all cities, counties from FL with DMR and analog repeaters available, just add your allias and ID, the users list is populated to almost 1000.

The one I purchased from this ebay seller is the HMN9030A but do not buy it because the one received has low and distorded receive audio although works fine on Tx. I will return it, I heard today on the DMR NA TG a guy who was using the one Jerry at Connect System is selling and it sounds great after removing a resistor inside for more TX audio, I ordered one tonight from CS for just $16.

From: HECTOR
Topic: 12 Message: 28

Ok, here we are with all information.
This simple mod was done by Ken KC1CYN to the speaker/mic that Connect System sell for the CS-700 to give it more TX audio, the results is a loud clean modulation that improve the intelegibility of the spkr/mic, before to proceed with the mod, test your mic first, its been reported some of them will not need the moc because they sound loud and clear.
To find out the short video and detailed picture of the mod, go to www.qrz.com, enter my call sign AD4C and move the page all the way down until you see the picture of my CS-700, there is a blue color link that will take you to a folder within my technical webside where you will find not only the FL State codeplug and manuals but also this new information about the speaker/mic.
I ordered my speaker/mic from CS yesterday and If my mic has low TX audio, I will perform this simple mod, I have heard Ken's CS-700 and he sounds great.

31. CS700 programming soft under linux (wine)

Yahoo group: cs700
Date: 2015-03-01 16:44:03 UTC
From: Kristoff
Topic: 31 Message: 31

Hi all,

Does anybody have any experience with the CS700 programming-software
under linux (using wine).

Any success? Any known issues?

Cheerio! Kr. Bonne.

Brand new in the box.. Never out. Includes programming cable.

No digital in my area.. not even D-star.

sn#2201D348240432

Have it listed on QRZ.com

$180....had a typo on QRZ but corrected it this evening. It's $180 not $280.

Larry W8LM
ARRL Life Member

The only digital in this area is the county and they are on 800megs..

Attachments: 1 described; binary payloads are missing from this source WARC

Yes, there is, take a look at the attached picture, although it will not read the amount of signal in dbm it will provide a visual small graph of the repeater/simplex received signal on the top left corner as you can see, it has 3 bars and a liitle antenna sign, display shows also the name of my local repeater in Delray beach and tha talk group used (DB NA), it also shows it is set to high power (H) and the battery level on the top right corner.
Feel free to ask for anything else about this radio that I own for a year now.
Enjoy your weekend.

37. Re: CS-700 Updated Firmware WIN 8.1

Yahoo group: cs700
Date: 2015-03-26 00:29:27 UTC
From: victor.balogh@...
Topic: 12 Message: 37

To all in the group:
I had trouble updating using a Windows 8.1 machine, the updater would fault
and windows would offer to find a solution but could not find one.
Moved the updater software, bin file and USB driver to an XP machine
and ran the update just fine.
The radio now shows firmware 2.06, I think my last was the original of
1.06 or 1.26?
Are there any issues I should lookout for? or differences?
Thanks
Victor

I tried to use Linux with the programming software and found that it works great under Wine. The problem comes when you try to read or write to the radio. The cable+radio seems to be recognized but it doesn't actually mount to a device. I'm not good with troubleshooting hardware issues like this and I haven't had a chance to follow up with anyone that is. Maybe it's a simple fix?

Good morning Eric, well I am not an expert in Linux, I have never used or even seen it working but one thing I can tell you is that in any operating system you chose, you will need to install the proper "drivers" to let the OS be able to read and writte the new codeplug into the radio, the fact that Linux recognized and installed the software don't mean it can read the radio without the proper drivers to comunicate with the radio. Search the net to look for drivers for Linux that support the CS-700 radio otherwise, you will never be able to read/writte the radio.

Load the old CPS software and a code plug for it. If you are trying to copy it, even better. If you dont have one, download a sample from the NC-PRN site.
The new software has problems, just to give you a warning

Start by going to "DMR Services" and adding contacts (really they are your talkgroups like TAC 310)

After they are added, go to Channels, digital channels and start adding repeaters. Your local one obviously is the one you start with.

Plug in the radio, read from it. Open your code plug and see if you can store it. If so, start adding other repeaters and stuff to your code plug such as scan lists, etc.

I may have a NC-PRN plug done in a couple days. It is tedious since you cant import the old code plugs, nor have I found a way to cut and paste.

What would really be nice is to be able to import channels from a spreadsheet. That would really help, but import only does talkgroups (Call Groups) and real contact info (Private Calls).

49. Good evening to all. I'm new with the CS700

Yahoo group: cs700
Date: 2015-05-27 03:50:18 UTC
From: ve2hs@...
Topic: 49 Message: 49

Good evening,

My name is Pierre. Call is VE2HS.
Just had a quick QSO with Mike KF5LFQ (looking for quarters) from Jacksonville, AR
Nice guy. He is the one who told me about this group.

I owned the700 for about 1 week now. Made a few QSOs here and there...
I posted a review on eham this morning because I was so impressed with their dilligent customer service/technical support.

So this pretty much sums up what I think about this great radio.
I am looking forward to try the CS 750.

I was also told that the 701 would also have DStar built in also? But it's a VHF radio and most digital activity in my area here in Montreal (CYUL) mostly happens on the UHF band.

So here is my review. Nice meeting you all
I own both callsigns VE2EBP and VE2HS so there is no confusion.

VE2EBP http://www.eham.net/user/profile/VE2EBP Rating: 5/5 May 26, 2015 03:57 Send this review to a friend Nice radio loaded with a lot of features Time owned: 0 to 3 months This is a great radio. Audio is beautiful and totally smooooth... Actually, it has a much better audio on transmit and receive than some of the motorolas that I know such as the XPR6550.

The radio is sturdy. It's made all of metal inside so the radio doesn't get hot when transmitting for a long time, which is important for us, ragchewers...

I managed to perform a programming error which confused the radio. I was amazed at the warping speed and great Customer service at Connect Sys. They returned my call in a few minutes!

This company has a lot of potential for growth amongst the ham community.

Please investigate the CS750, their later model. My understanding is that it's pretty much the same radio inside except that it has 10,000 memories and contacts instead of 1000. Plus it comes with some added bonus features as ANI (MDC-1200), DTMF squech and I don't know what else.

None of them have built in GPS which would be nice for future versions.

I rated the radio 4 simply because the PTT doesn't 'feel' as sturdy as I would have expected for a radio of this class. A rubberized PTT would have been nice with swivel at the bottom of the PTT...

Other than that, I would recommend this radio, or even better, the 750 to any ham that wants to get in to DMR.

To end on an upside note, this radio comes with the charger and the programming software (and interface cable).

How can you go wrong? No need to go see a dealer to program your radio. It's all in the package and it's very easy to program. I figured it out within less than 1 hour, I had 4 repeaters programmed with all their talkgroups, etc.

Very very nice. Great job Connect Systems and thanks Jerry for your great and excellent service.

Hi Pierre, welcome to the DMR world, I have been using also a CS-700 for more than a year together with a Hytera mobil in my truck.
I wanted to tell you something about the new CS-700 that perhaps you and other members of the group are not aware of this matter.
The CS-750 will not take the codeplug of the CS-700 even the programming cable is the same, the software to program is different and there is no way to copy and paste or to clon the list of users you have had programmed in your CS-700, in my case my codeplug is very big covering the whole state of Florida and with the whole list of 1000 users filled already, so I would take me hours typing the same codeplug to the CS-750 which is an improved version of the CS-700 for sure with some extra features as you mention.
So, if you are new in DMR and want to jump into the CS-750 my advice is not to build a too big codeplug in your actual CS-700 unless you wanted to spend quite sometime building the codeplug in a new CS-750 trying to do it same way you did with the former radio.
I am very pleased with my CS-700, never had an issue with it, I travel all the time with it and use it everywhere there is a DMR repeater and so far I will not buy the CS-750 unless in future versions they decide to make the software compatible with the CS-700.
Enjoy your radio as we all are enjoying ours.

AD4C

The CS-701 is VHF but does not doe D-Star. It is a DMR radio like the 700, just VHF instead of UHF.

Upgrading the 700 to a 700A should make the software compatible with the 750. The 700A upgrade replaces the firmware with a version compatible with the newer CPS. That will give you compatibility with he 750 at the code plug level, Without the upgrade, I think CS is saying that you will not get to use the new CPS software.

There is Nothing Wrong with the 700. If it works for you it's as good as its going to get. If you want to use the new CPS, or any new firmware that "might" come out for it, then upgrade it, but that's all you get. Its probably worth the upgrade cost just for insurance but I have a 700 and 750 and probably wont upgrade anytime soon.

The problem with this matter is that If you have an extensive codeplug as I do have for FL state on my CS700, it won't be able to be written in the newer CS700A or CS750 so youwill have to spend hours again tryping not only the whole codeplug but also the long list of users and If you have had the pacience like I did to enter guys coming into the system, my list is already filled with 990 stations (the rest 10 are the TG codes).
If your CS700 works fine and you don't want to lose your codeplug, don't upgrade it, leave it alone.

Someone will take the time to convert a comprehensive code plug for FL and upload it to one of the groups I would suspect. There are a number of groups that maintain code plugs for their networks. It wont be long before they are converted to the new format.

My Code Plug for the 750 (new CPS) has 457 channels and 977 contacts. The channels had to be entered directly but the contacts were imported in. My understanding is that there is work being done to "Export" channels from CS700 Code Plugs in order to smooth migration.

You can go to DMR-MARC's web site and download a list of current users n a format that can be opened with Microsoft Excel. With some basic rearrangement of columns and deletion of unneeded information, you can end up with a spreadsheet that can be imported directly into the new CPS. The new CPS software has both "Export" and "Import" of channels and contacts that works very well.

Did you install it before plugging it in so that windows searches for the driver or you can go into device manager find it listed in control panel and remove it to make it search for it or another option change USB ports u plug it into

That's another way to force it

Steve

Topic: 55 Message: 72

Hello group,

The driver for this radio is different to most you have used before. It is NOT a com port driver.

It is a STM device in DFU mode, made by ST Microelectronics.

The programming lead is just a lead, the smarts are inside the radio.

To set up the USB driver do the following.

WinXP
Instal the radio programming software first.
Plug the lead into the computer USB and into the radio and turn the radio on. Make sure you are on the internet.
WindowsXP will automatically install the driver for you.

Win 7
Instal the radio programming software first.
For some reason Win7 cannot find the driver automatically like WinXP.
Run driver setup found in files section of the groups webpage.
Reboot PC.

From my own experience, I think that the radio programming software for this radio was developed for XP
as more features work on XP than Win7. When Microsoft pulled the plug on XP support last year, more than half
the PCs in China were XP. The Chinese Govt. in response, banned Win7/8.

Hope this is a help.

Regards,

Doug VK2XLJ

Topic: 88 Message: 89

I would second this request. There IS a bunch of 700's out there and they do just fine for those who do not want to put the whole DMR-DMARC data base in their radio.

I figure it costs money, and it is a discontinued radio, but maybe one Final update that fixes the known problems.

Also, at least we would know that this was the Final one and not keep hoping there may be one more.

Any update for the 700 to FIX this problem
CPS Version 1.25 works with Firmware Version 2.19
Firmware Version 2.19 solves the Nuisance Delete and DTMF * issue but has timing problems and will not work as good as Firmware Version 2.06 for contacting repeaters.
If you update this its almost imposable to work repeaters.
Can you FIX it please.
I like my 700 just as a 700 and don't need a 750
Thanks

92. Our UPS courier can not contact you (parcel #4070112)
